Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Applicant's election without traverse of Group I, claims 1-4 in the reply filed on February 14, 2005 is acknowledged.

Accordingly, claims 5-14 are withdrawn from further consideration by the examiner, 37 C.F.R. § 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. § 103 (a) as being unpatentable over Miller (US 5,715,749) .

Miller teaches a method for exchanging a roller of a printing unit having the steps of withdrawing a roller 12a that is to be exchanged from the working position (coll.4 lines 20 and 21), transporting the roller by a transport device into an unloading position (the upper shelf 74) and operating the transport cart or the robot 10 to move the replacement roller 12b from a reserve location 16 and disposing the roller on the transport cart or the robot and operating the transport device 70,76 to bring the roller to the working position. Miller does not teach the step for exchanging the engraved

roller. However, it would have been obvious to one of ordinary skill in the art to use the steps of exchanging the roller of a printing unit as taught by Miller in a printing press since the steps are the same regardless of the printing roller used in the printing machine.

Allowable Subject Matter

Claims 1-3 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach the steps of operating the robot to bring the additional first engraved rollers to the unloading position of each of the printing units and operating the robot to successively bring the second engraved rollers to the reserve station at each of the printing units.

Conclusion

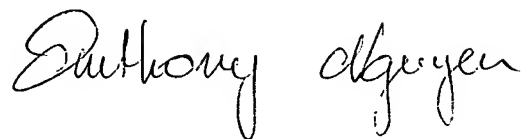

The patents to Gladow, Borel Kobler et al., Riis, Troyer and Segbert et al. are cited to show other structures and methods having obvious similarities to the claimed structure and method.
